THE WORD
SINCE 2008

activedigitalAI

The winners of the next decade won't necessarily be the smartest people.
They'll be the most adaptable, curious, resilient and human.
The Human Advantage
AI can recognise emotion but only people can genuinely care.

Communication
Creativity
Leadership
Empathy
Teamwork
Critical thinking
A robot can process information.
It cannot inspire a team.

THE NATIONAL
ROBOTARIUM

Can Robots Save Lives?

CROVER

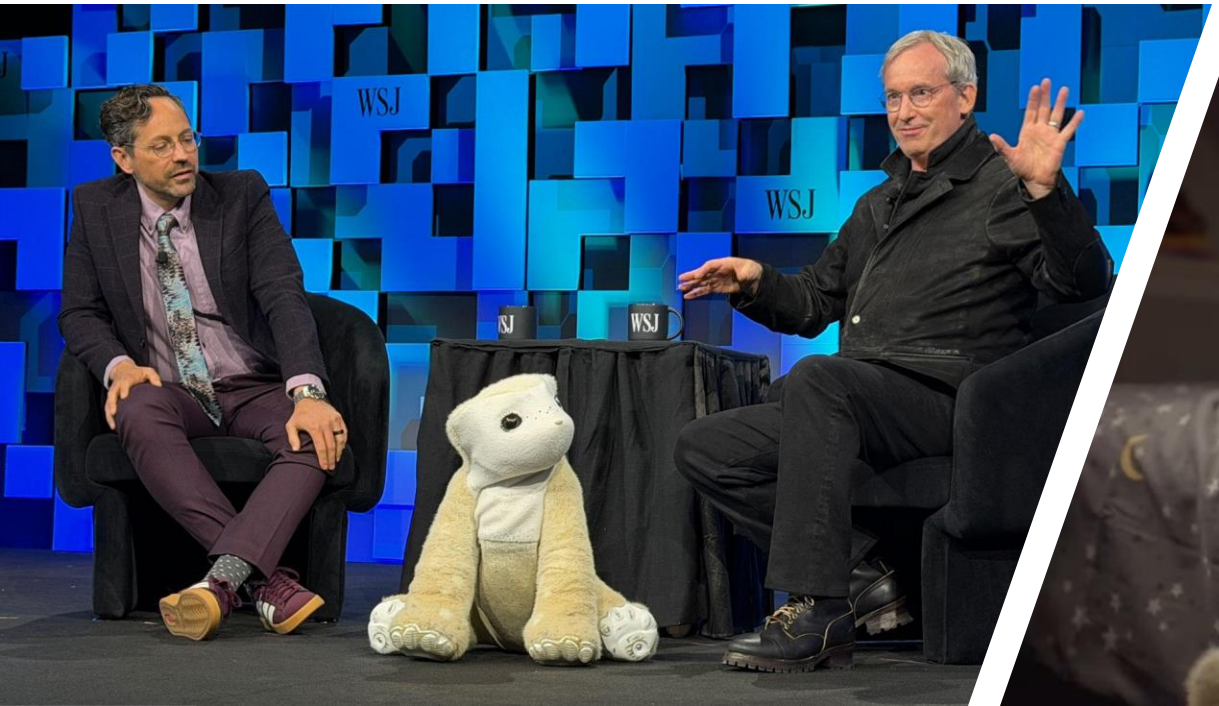

Students Alexandre Colle and Edinburgh College of Art graduate Camila Jimenez Pol won a Main Edge award of £80,000 for their company Konpanion, whose robotic companion Maah is designed to provide comfort and companionship.

What kind of childhood are we designing

…and are we really listening?

INTERNET MATTERS: DIGITAL WELLBEING

More connected — and more exposed

50%

said technology helped them find supportive communities

56%

said it helped them meet good friends

67%

reported experiencing an online harm

ME, MYSELF & AI

AI is becoming social, not just functional

23%

of child AI-chatbot users had sought advice from a chatbot

35%

said talking to one could feel like talking to a friend

12%

had used one because they had nobody else to talk to

For vulnerable children, the friendship signal was stronger.

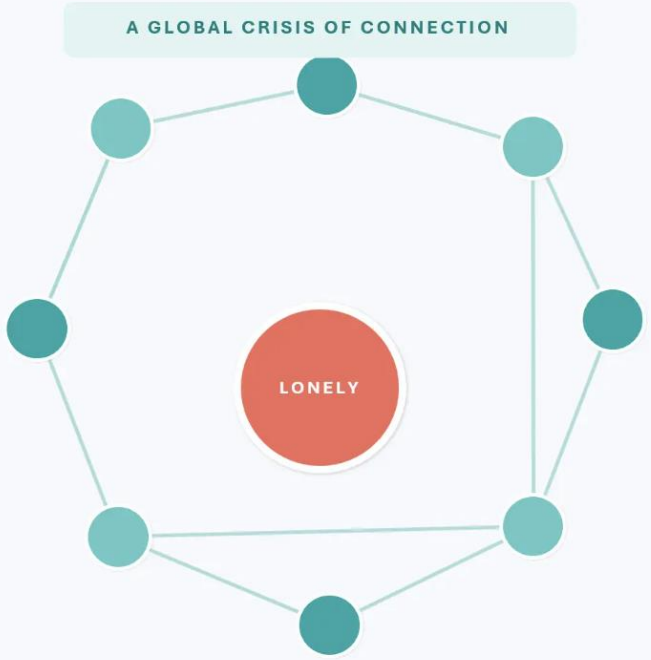

THE LONELINESS PANDEMIC

We are more connected than ever, yet young people are among the most likely to feel alone.

1 IN 5

adolescents and young adults experience loneliness

The age groups most affected worldwide

Loneliness is not simply being alone.
It is the gap between the connection we need and the connection we experience.

When a child chooses an algorithm because they don't have a person to talk to…

is that a technology issue or a social-needs issue?

Probably both.
And that changes where responsibility sits.

“Perhaps the biggest change we can make tomorrow isn’t taking technology away from children. It’s making sure that when they look up from the screen, there is something and someone; worth looking up for.”
